

ANTHONY BOLLAS

Union, NJ | bollascareer@gmail.com | linkedin.com/in/realtone | anthonybollas.com

IT Systems Administrator and Security professional with a B.S. in Computer Science, CompTIA Network+, and hands-on experience managing enterprise infrastructure, automation scripting, and network configuration. Pursuing CompTIA Security+ to expand into cybersecurity. Seeking a full-time IT, systems, or security role in the NJ/NY metro.

TECHNICAL SKILLS

Systems & Administration: Windows Server 2025, Active Directory Domain Services, Group Policy (GPOs), MCM/SCCM, Hyper-V, Proxmox VE, Raspberry Pi/Linux, Kali Linux

Networking: VLAN configuration, OpenVPN (server deployment & PKI), firewall rules, DNS management (Pi-hole), DHCP, TCP/IP, TP-Link Omada

Scripting & Development: PowerShell (automation, data processing), Python, JavaScript, TypeScript, Angular, SQL, PostgreSQL, Git

Hardware & Diagnostics: PC builds, RAM/HDD replacement, IBML high-speed scanners, Ricoh scanners, Windows CMD diagnostics (sfc, ipconfig, DISM), Apple ecosystem

Soft Skills: Cross-functional collaboration, customer de-escalation, technical presentations, multitasking in high-volume environments

PROFESSIONAL EXPERIENCE

Systems Administrator | Innodata (Contract)

2026 – Present

- Deploy, manage, and troubleshoot infrastructure across 60 desktops, 60 Ricoh scanners, 2 IBML high-speed scanners, and 20 laptops, ensuring minimal downtime across production workflows
- Authored PowerShell scripts to merge, separate, and deduplicate large production datasets — reducing error recovery time from hours to minutes and enabling the processing pipeline to handle data volumes that previously exceeded software limits
- Developing a Python-based interactive warehouse map to serve as a live asset registry, tracking serial numbers, monitor assignments, and server connections for all endpoints — replacing a static floor map with a dynamic audit tool
- Plan and execute structured cabling projects including ethernet installation to support network expansion and hardware relocations
- Diagnose and resolve network issues in collaboration with the engineering team, maintaining connectivity and uptime across all departments
- Partner with engineering to investigate software bugs and evaluate application improvements that streamline operational workflows
- Maintain a comprehensive device inventory schema and manage spare parts stock to support rapid hardware replacement and reduce resolution times
- Document new issues and resolutions in a shared knowledge base, improving cross-shift team response times and standardizing troubleshooting procedures
- Oversee 4 production servers maintained on UPS power, ensuring 24/7 uptime and availability for engineering and operations teams — including network configuration, system permissions, and jump server access management for cross-team remote access
- Operate as the sole IT resource on shift, independently managing all infrastructure support across a high-volume production environment

Apple Specialist / Software Developer (Career Experience) | Apple

2022 – Present

Software Developer — Career Experience

Jan 2025 – Jun 2025

- Upgraded an internal request management application using Angular and TypeScript, streamlining administrator workflows and reducing back-and-forth communication required to resolve issues
- Built a parser tool adopted across multiple teams, enabling employees to work more efficiently with internal resources
- Launched the streamlined request tool for an additional admin team, expanding impact across the organization
- Delivered a company-wide presentation streamed to approximately 50 individuals, showcasing project outcomes and key learnings
- Updated onboarding documentation to improve knowledge transfer for future program participants

Apple Specialist

2022 – Present

- Triage customers to appropriate service paths including purchases, phone support, and hardware repair appointments, managing multiple customers simultaneously during peak hours
- Troubleshoot cellular, configuration, data transfer, and network connectivity issues across the full Apple product ecosystem, including VPN misconfigurations and device setup failures
- Partner with Genius Bar technicians to identify front-of-house solutions, reducing unnecessary repair appointments
- De-escalate frustrated customers by identifying root concerns and delivering clear, effective resolutions in a high-volume retail environment

Repair Agent | Geek Squad (Best Buy)

2020 – 2022

- Diagnosed and repaired computers across 3–5 daily appointments, troubleshooting hardware and software issues including driver failures, OS corruption, and network connectivity problems
- Performed hardware repairs and upgrades including RAM and hard drive replacement, and built custom PCs to customer specifications

- Used Windows command-line tools (sfc /scannow, ipconfig, DISM) for diagnostics and guided remote customers through network troubleshooting procedures
- Managed concurrent appointments and de-escalated frustrated customers in a fast-paced retail environment

TECHNICAL PROJECTS

Interactive Warehouse Asset Map · *Python (In Progress)* · [anthonybollas.com](#)

- Building a Python-based dynamic floor map that replaces a static document with a live asset registry — tracking device serial numbers, monitor assignments, and server connections across 140+ endpoints

Prosumer Network Lab · *TP-Link Omada* · [anthonybollas.com](#)

- Designed and deployed a segmented home network with 5 VLANs, inter-VLAN firewall rules, and VPN remote access

Home DNS Server · *Raspberry Pi · Pi-hole · Linux* · [anthonybollas.com](#)

- Deployed a Pi-hole DNS server for network-wide ad blocking and malicious domain filtering with static IP and custom blocklists

Active Directory & Security Lab · *Windows Server 2025 · Hyper-V · Active Directory · Kali Linux* · [anthonybollas.com](#)

- Deployed Windows Server 2025 on bare metal hardware, configured as an Active Directory domain controller with file share services and Hyper-V virtualization
- Domain joined a physical client machine to the server, replicating a real enterprise endpoint management environment with GPOs and user management
- Running Kali Linux in Hyper-V for offensive security research and vulnerability testing against the controlled lab environment
- Deployed OpenVPN server on the network with full PKI configuration — enabling secure remote access to the Active Directory environment and Hyper-V infrastructure from any location

CERTIFICATIONS

CompTIA Network+ — Obtained May 2026

CompTIA Security+ — In Progress — Exam Scheduled July 2026

EDUCATION

Bachelor of Science in Computer Science

May 2024

Kean University, Union, NJ · Relevant coursework: Networking, Smart Home IoT Systems

Associate of Science in Computer Science

May 2021

Union County College, Cranford, NJ
